— EXPERIENCE ————

EcoSafeSense

FIRMWARE ENGINEER

Ottawa | October 2024-Present

· Writing firmware for ESP32-based air quality sensor and complementary test bench.

Cohere

SENIOR DATA QUALITY SPECIALIST — ADVANCED MATHEMATICS

Freelance | October 2024-Present

• Writing, auditing and correcting LLM prompts and responses with utmost attention to detail to produce **spotless training data** in formal logic, combinatorics, number theory, graph theory and optimization.

— PROJECTS ———

DFA Regex Engine

- Built regex engine in C99 that compiles regular expressions down to minimal deterministic finite automata to match input strings in **linear time** without backtracking.
- Wrote extensive test suite of over **400 tests** to ensure end-to-end correctness of engine and catch regressions.
- Developed grep-like tool as real-world stress test for engine, achieving performance on par with GNU grep.

Breadboard Microcomputer

- Designed 8-bit microcomputer from from logic gates upward, including instruction set architecture, from-scratch assembler and cross-platform emulator in Rust, totaling over **20 000 SLOC** and **750 hours** of work.
- Wrote various utilities in Assembly running natively on microcomputer Wozmon-inspired memory monitor 16×16 sprite editor Tetris clone native assembler postfix notation calculator.
- Built microcomputer in hardware by hand-wiring discrete 74HC-series logic chips on breadboards.

Rudimentary C Compiler

- · Building C99 compiler from scratch in Rust targeting breadboard microcomputer's instruction set.
- Implemented dead code elimination, constant folding and strength reduction, resulting in **20% increase** in generated code performance and **10% reduction** in binary size across test suite.
- Developed extensive C standard library, including heap allocator supporting malloc and free, string handling functions such as strlen and memcpy and input/output routines including getline and printf.

Multilayer Perceptron

- Wrote static reverse-mode automatic differentiation library in C99 for use in deep learning.
- Designed multilayer perceptron model and implemented stochastic gradient descent, momentum and L2 regularization, achieving **96% accuracy** on MNIST database after 3 minutes training on 16 threads.

— VOLUNTEERING ——

Computer Science Club

CLUB EXECUTIVE

University of Ottawa | June 2022-Present

- Running growing community of **over 1500** computer science students at the University of Ottawa.
- Collaborating with executive board to brainstorm, plan, fund and market monthly events and meetups, such as workshop on Vim bindings and mini-course on the λ -calculus.

Hack the Hill Hackathon

DEVELOPMENT MANAGER — DEVELOPMENT TEAM

Ottawa | November 2022-October 2024

- Led development of open-source event management system built with Next.js and Prisma and used by over **1000 hackers** and **50 organizers** throughout hackathon.
- Built and maintained internal sporsorship payment portal powered by Stripe and React.js in collaboration with sponsorship team, enabling processing of over **20 000\$**.

— AWARDS ———

• **uOCTF 2025** — 1st place

March 2025

• uOttaHack 6 - 1st place, QNX challenge

January 2025 March 2024

• CS Games 2024 — 1st place, IOT challenge

November 2023

uOCTF 2024 — 1st place
DeFi The Conventional — 1st place, DeFi challenge

March 2022
